

**COMP 2067: Programming for Beginners**

Winter 2022, Assignment #2

Due Date: *Monday, Mar 14*

Covers Lessons 4-7

For each question, write a Python program **with comments** to perform the required tasks. Each program should be submitted in a **separate** file.

1. Write a program, with comments, to do the following: **(18+2=20)**

- a. Ask the user to enter their first name. The user may enter the name using uppercase or lowercase letters.
- b. If the name starts with a vowel, print the message *'Your name starts with a vowel.'*; otherwise print the message *'Your name starts with a consonant.'*
- c. Print the first letter of the name in uppercase, along with a suitable message. This part should be executed for all cases, whether the name starts with a vowel or consonant.

An example run is shown below.

2. Write a program, with comments, to do the following: **(20+2=22)**

- a. Ask the user to enter a positive integer. (The user should enter digits only).
- b. Check the value entered to see if it corresponds to a positive integer.
- c. If the user entered a positive integer do the following:
  - i. If the integer is even print *"You entered an even number"*
  - ii. Otherwise if the integer is a multiple of 7 print *"You entered an odd number that is a multiple of 7"*
  - iii. Otherwise print *"You entered an odd number that is NOT a multiple of 7"*
- d. Otherwise, print the message *'You did not enter a valid input!'*.

**HINT:** Use the built-in **isdigit()** method for strings in step **b**. Some sample sessions are shown below.

3. Write a program, with comments, to do the following: **(37+2=39)**

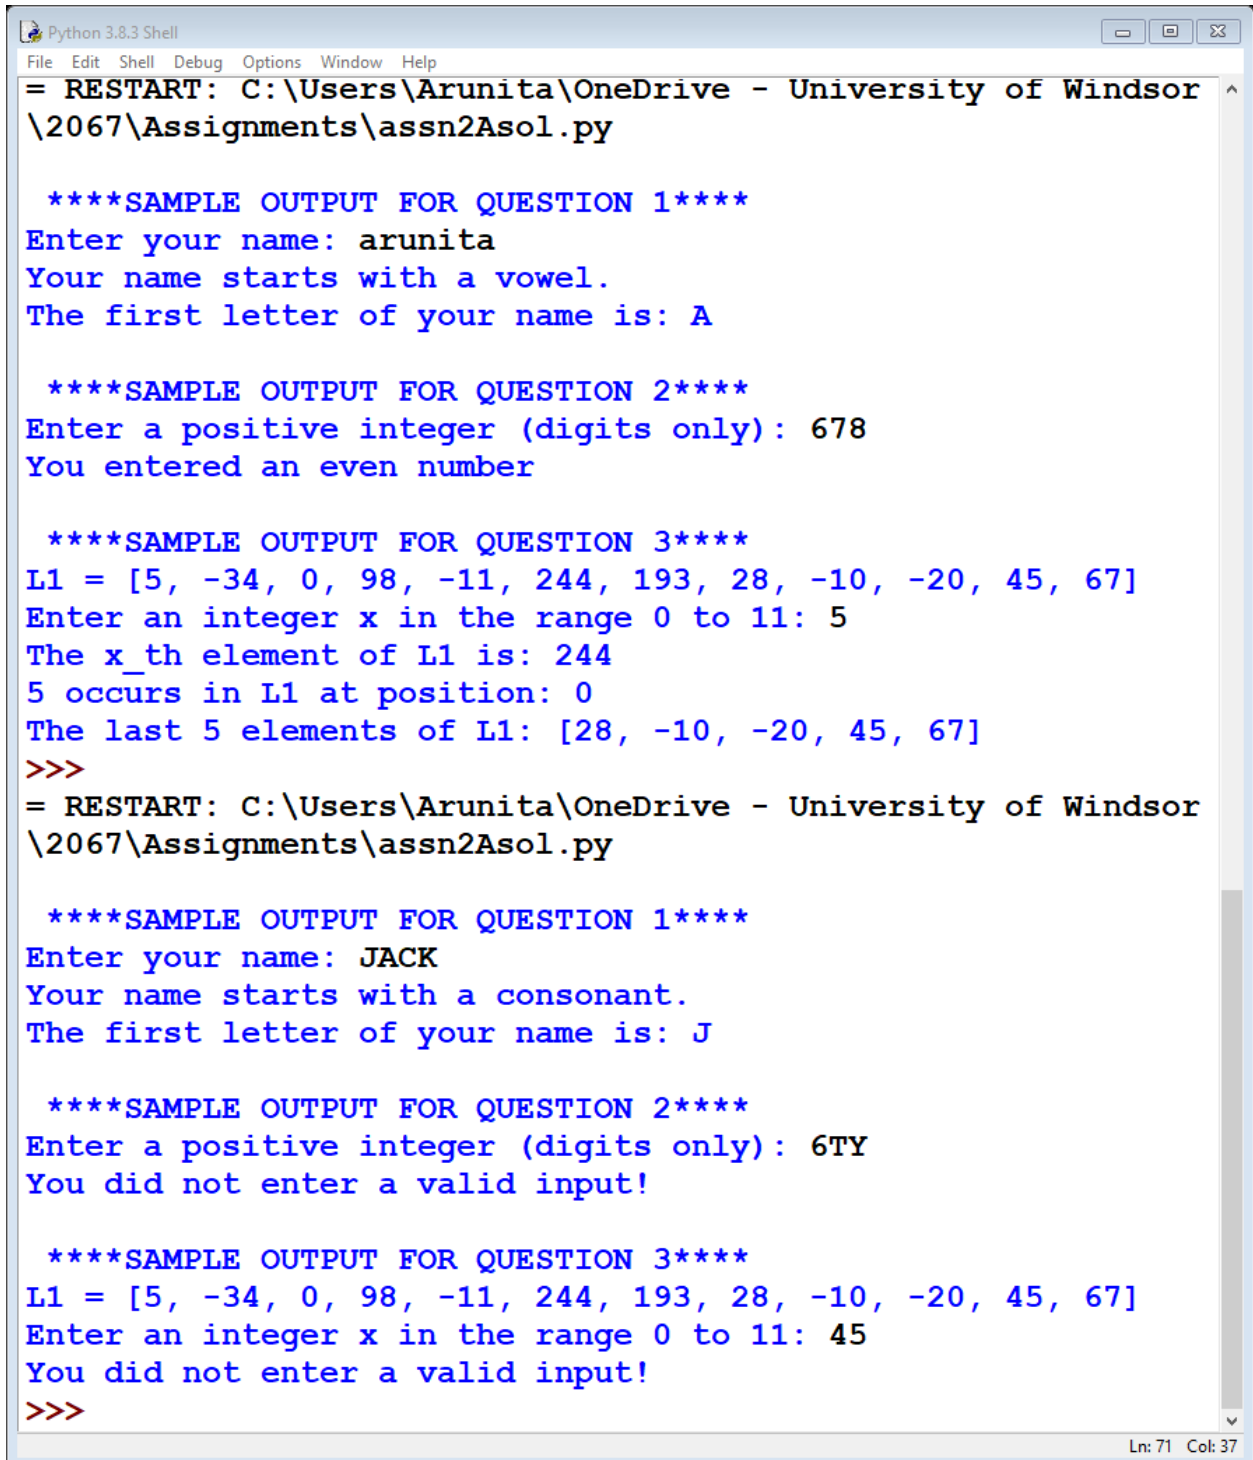

- a. Define a list L1 consisting of at least 10 integers (e.g. L1 = [5, -34, 0, 98, -11, 244, 193, 28, -10, -20, 45, 67]) and print L1 with suitable message.
- b. Ask the user to enter a value between 0 and  $n-1$ , where  $n$  is the number of items in the list L1. You may assume the user will enter a positive integer, but it may not be in the specified range.
- c. Check the value  $x$  entered by the user is in the proper range (i.e.  $0 \leq x \leq n-1$ ).
- d. If  $x$  is in the proper range:
  - i. Print the  $x^{\text{th}}$  element of L1 with a suitable message.
  - ii. If the integer  $x$  occurs in L1, print a message indicating the position of  $x$  in L1; otherwise print a message indicating  $x$  does not occur in L1.
  - iii. If  $x$  is an even number and greater than 0, print the first  $x$  elements of L1. If  $x$  is an odd number and greater than 0, print the last  $x$  elements of L1. If  $x$  is 0, print an empty list.
- e. Otherwise (i.e.  $x$  is not in the proper range), print the message *'You did not enter a valid input!'*.

## COMP 2067: Programming for Beginners

Winter 2022, Assignment #2

Due Date: *Monday, Mar 14*

Below is a screenshot showing a sample output for each question. Note that while the sample outputs below are all shown together for convenience, you should be submitting three **separate** files.

```
Python 3.8.3 Shell
File Edit Shell Debug Options Window Help
= RESTART: C:\Users\Arunita\OneDrive - University of Windsor
\2067\Assignments\assn2Asol.py

****SAMPLE OUTPUT FOR QUESTION 1****
Enter your name: arunita
Your name starts with a vowel.
The first letter of your name is: A

****SAMPLE OUTPUT FOR QUESTION 2****
Enter a positive integer (digits only): 678
You entered an even number

****SAMPLE OUTPUT FOR QUESTION 3****
L1 = [5, -34, 0, 98, -11, 244, 193, 28, -10, -20, 45, 67]
Enter an integer x in the range 0 to 11: 5
The x_th element of L1 is: 244
5 occurs in L1 at position: 0
The last 5 elements of L1: [28, -10, -20, 45, 67]
>>>
= RESTART: C:\Users\Arunita\OneDrive - University of Windsor
\2067\Assignments\assn2Asol.py

****SAMPLE OUTPUT FOR QUESTION 1****
Enter your name: JACK
Your name starts with a consonant.
The first letter of your name is: J

****SAMPLE OUTPUT FOR QUESTION 2****
Enter a positive integer (digits only): 6TY
You did not enter a valid input!

****SAMPLE OUTPUT FOR QUESTION 3****
L1 = [5, -34, 0, 98, -11, 244, 193, 28, -10, -20, 45, 67]
Enter an integer x in the range 0 to 11: 45
You did not enter a valid input!
>>>
Ln: 71 Col: 37
```
